Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

ET-D75LE6	4 : 3	minimum maximum	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 20.7 - 56.6$ $L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 24.8 - 73.6$
ET-D75LE1	4 : 3	minimum maximum	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 30.68 - 76$ $L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 40.98 - 100$
ET-D75LE2	4 : 3	minimum maximum	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 41.15 - 80$ $L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 61.73 - 106$
ET-D75LE3	4 : 3	minimum maximum	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 61.73 - 96$ $L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 103.09 - 122$
ET-D75LE4	4 : 3	minimum maximum	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 103.09 - 116$ $L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 163.93 - 101$
ET-D75LE8	4 : 3	minimum maximum	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 163.95 - 386$ $L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 307.18 - 360$
ET-D75LE5	4 : 3	(fixed focus)	$L \text{ (mm)} = (\text{diagonal screen size in inches}) \times 15.798 - 84$

- The figures in the above table may vary by approximately ±5% depending on the projection lens that is used.
- When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
- At the shortest projection distance, the zoom lens characteristics may cause slight image distortion.
- For the ET-D75LE5, the height from the edge of the screen to the center of the lens (H) is 1/2 of the screen height. Also, because the ETD75LE5 is a fixed short-throw lens, the lens shift function cannot be used with it.

Mounting and Operation Precaution

Do not mount the projector so that it angles downward from the vertical (including downward angles of ±45°, because this would adversely affect its lamp cooling ability. For detailed information, please consult your sales representative.

Shift range

Optical axis shift function allows to shift the position of a projected image as shown below.

ET-D75LE1/D75LE2/D75LE3/D75LE4/D75LE8

ET-D75LE6

- Because the ETD75LE5 is a fixed short-throw lens, the lens shift function cannot be used with it.

List of compatible signals

This projector supports RGB signals with horizontal frequencies of 15 to 100 kHz, vertical frequencies of 24 to 120 Hz and dot clock frequencies of 20 MHz to 162 MHz.

NOTE: The native resolution of this projector is 1,920 x 1,080 pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.

1. The "i" appearing after the resolution indicates an interlaced signal.
Line flicker occurs when an interlaced signal is input.

Synchronization method	Start-stop synchronization
Baud rate	9,600 bps
Parity	None
Character length	8 bits
Stop bit	1 bit
X parameter	None
S parameter	None

Basic format

Transmission from the computer begins with STX, then the ID, command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

CAUTION

- It may not be possible to send or receive commands for about 10 to 60 seconds when the lamp is first turned on. If this occurs, wait for 60 seconds, then try sending or receiving again.
- When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more.

Command example

To set the on-screen display off, send the command as shown below.

NOTE: When sending commands without parameters, a colon (:) is not necessary.

Notes on Projector Placement and Operation:

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector while it is operating.
2. Make sure there is an unobstructed space of 500 mm (19-11/16") or more around the projector's exhaust openings.
3. Do not stack projector units directly on top of one another for the purpose of multiple (stacked) projection. When stacking projector units, be sure to provide the amount of space indicated below between them. These space requirements also apply to installations where only one projector unit is operating at one time and the other unit is used as a backup.
4. If the projector is placed in a box or enclosure, ensure the temperature of the air surrounding the projector is between 0°C/32°F and 40°C/104°F. Also make sure the projector's intake and exhaust openings are not blocked. Take particular care to ensure that hot air from the exhaust openings is not sucked into the intake openings.

Direction of Air Intake and Exhaust

Operating the Projector Continuously

1. If the projector is to be operated continuously 24 hours, use the lamp relay mode. The projector cannot be operated continuously 24 hours in quad-lamp mode. Allow a minimum of two hours per day of non-operation time if the projector is to be operated continuously more than 22 hours.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
